Impact of Environmental Regulations on the Electric Power Industry: Evidence from Chinese thermal power companies

Yifei Zhang, GDAE Visiting Research Fellow
Research Center of Climate Change and Green Trade,
Shanghai University of International Business and Economics

Environmental regulations are important considerations in achieving the goals of emission reduction. In China, a variety of policies have been initiated to improve the efficiency of electric power generation of enterprises. Zhang examines the impact that such policies have on the total factor productivity of the electric power industry.
